**By H.H. Schaefer : Topological Vector Spaces (Graduate Texts in Mathematics)** bs candidates are further required to select a minor field which consists of three additional courses that are outside the department of mathematics and either are algebra group theory basic notions and examples subgroupsnormal subgroups quotients products semi direct product group acting on sets lagrange theorem Topological Vector Spaces (Graduate Texts in

Mathematics):

2 of 2 review helpful Perfect book very complete By David Salas Videla The book contains almost everything you need to know about topological vector spaces It is perfect for consulting The only problem is the notation a little bit complicate and that the constructions are done with filters instead nets It has been very useful Also it is better to consult first this book before going to Bourbaki s or searching in p Intended as a systematic text on topological vector spaces this text assumes familiarity with the elements of general topology and linear algebra Similarly the elementary facts on Hilbert and Banach spaces are not discussed in detail here since the book is mainly addressed to those readers who wish to go beyond the introductory level Each of the chapters is preceded by an introduction and followed by exercises which in turn are devoted to further results and supple The book has firmly established itself both as a superb introduction to the subject and as a very common source of reference It is becoming evident that the book itself will only become irrelevant and pale into insignificance when and if the entire subj
