By Walter T. Federer : Statistical Design and Analysis for Intercropping Experiments: Volume 1: Two Crops (Springer Series in Statistics)

Statistical Design and Analysis for Intercropping Experiments: Volume 1: Two Crops (Springer Series in Statistics):

25 of 25 review helpful more complex intercropping designs By Michael R Chernick The design of experiments plays a major role in industry today Much of the original statistical research began in the 1920s and 1930s motivated by agricultural experimentation After the seminal work of Fisher Federer was among the leading researchers in this area and he produced a major text many years ago Intercropping is apparently an e Intercropping is a method of sustaining or improving soil structure by growing two or more crops on the same field It is a technique of wide application and of growing importance for both commercial and subsistence farmers This textbook provides a comprehensive survey of the design and analysis of intercropping experiments Its main themes are that techniques such as relative indices make it possible to cover a wide variety of conditions and that statistical models fo
