**By Rudolf Fritsch, Gerda Fritsch : The Four-Color Theorem: History, Topological Foundations, and Idea of Proof** ce 201 earth materials and processes 2 3 4 earth materials structure of solid earth rock cycle common rock forming minerals types of rocks and its the branches of mathematics it is probably fair to say that the content and nature of the subject of modern mathematics is less familiar to the average scientifically The Four-Color Theorem: History, Topological Foundations, and Idea of Proof:

0 of 0 review helpful Very interesting book By Eric Bickerton I used this book as a resource for my history of mathematics paper on the four color theorem It provided a lot of interesting information and was a great read This elegant little book discusses a famous problem that helped to define the field now known as topology What is the minimum number of colors required to print a map such that no two adjoining countries have the same color no matter how convoluted their boundaries Many famous mathematicians have worked on the problem but the proof eluded fomulation until the 1950s when it was finally cracked with a brute force approach using a computer The book begins by discussin Language Notes Text English translation Original Language German From the Back Cover This elegant little book discusses a famous problem that helped to define the field now known as graph theory what is the minimum num
