In this book we study function spaces of low Borel complexity Techniques from general topology infinite dimensional topology functional analysis and descriptive set theory are primarily used for the study of these spaces The mix of methods from several disciplines makes the subject particularly interesting Among other things a complete and self contained proof of the Dobrowolski Marciszewski Mogilski Theorem that all function spaces of low Borel complexity We strongly recommend this book to mathematicians working in Cp theory infinite dimensional topology or dimension theory and also to students interested in these topics Mathematical s
