normed topological algebras with involution demonstrating with Topological Algebras with Involution, Volume 200 (North-Holland Mathematics Studies):

This book familiarizes both popular and fundamental notions and techniques from the theory of non normed topological algebras with involution demonstrating with examples and basic results the necessity of this perspective The main body of the book is focussed on the Hilbert space bounded representation theory of topological algebras and their topological tensor products since in our physical world apart from the majority of the existing unbounded operators we of A distinctive and very nice feature of the book is a large number of well chosen examples There are also many useful historical remarks This is a most welcome addition to the existing literature on topological algebras
