From North Holland : History of Topology network topology is the arrangement of the various elements links nodes etc of a communication network essentially it is the topological structure of a network the physical layout of devices on a network every lan has a topology or the way that the devices on a network are arranged and how they communicate History of Topology:

There is no reason that mathematical typesetting cannot be as good with an e book as with the print version Those of us in technological fields who value the convenience of electronic publication would appreciate someone making the effort to get the e book versions done properl Topology for many years has been one of the most exciting and influential fields of research in modern mathematics Although its origins may be traced back several hundred years it was Poincar eacute who gave topology wings in a classic series of articles published around the turn of the century While the earlier history sometimes called the prehistory is also considered this volume is mainly concerned with the more recent history of topology from Poincar ea This volume contains forty articles covering a wide range of topics including the interaction of topology with other branches of mathematics The articles reflect a variety of viewpoints and some deal with the lives of mathematicians who have contributed
