By Carl-Erik Särndal, Sixten Lundström : Estimation in Surveys with Nonresponse describes two sources of bias in survey sampling unrepresentative samples and measurement error compares survey bias to sampling error

includes video lesson example surveys of statistics netherlands selective non response is not uncommon it occurs in a number of surveys of statistics netherlands a follow up study of Estimation in Surveys with Nonresponse:

Around the world a multitude of surveys are conducted every day on a variety of subjects and consequently surveys have become an accepted part of modern life However in recent years survey estimates have been increasingly affected by rising trends in nonresponse with loss of accuracy as an undesirable result Whilst it is possible to reduce nonresponse to some degree it cannot be completely eliminated Estimation techniques that account systematically for nonresponse are useful for the theoretically inclined survey statistician Technometrics May 2007 This impressive piece of work can be thoroughly recommended to anyone Zentralblatt MATH Volume 1079 Fr
