From The Mathematical Association of America : Geometry at Work (Mathematical Association of America Notes) in mathematics non euclidean geometry consists of two geometries based on axioms closely related to those specifying euclidean geometry as euclidean geometry lies abstract this book is about differentiation of functions it is divided into two parts which can be used as different textbooks one for an advanced undergraduate Geometry at Work (Mathematical Association of America Notes):

3 of 3 review helpful A Wonderful Surprise By John Price This book is a wonderful surprise Even though I have a been a mathematician for many years but not in the area of geometry and even though I contributed an article I was completely surprised by the range and accessibility of the topics covered in this collection Here is a summary Art and

Architecture four articles including the geometry of Beginning with art and architecture and culminating with science and mathematics itself this book discusses geometric ideas and their many applications throughout history These range from ancient to modern concrete to abstract and familiar to cutting edge Each chapter is written by a leading expert or pioneer in their own field and the book should be a valuable resource for students and teachers of geometry alike About the Author Editor Catherine A Gorini Gorini is among the faculty of Maharishi University of Management in Fairfield Iowa where she is professor of mathematics and chair of the Department of Mathematics Her doctoral degree from the University of Virgin
