This text is based on a one semester graduate course taught by the author at The Fields Institute in fall 1995 as part of

the homotopy theory program which constituted the Institute's major program that year. The intent of the course was to bring graduate students who had completed a first course in algebraic topology to the point where they could understand research lectures in homotopy theory and to prepare them for the other more specialized graduate courses being held. A comprehensive introduction to many topics in algebraic topology up to the tools currently used in research, the author has pulled off a real tour de force, could serve as an excellent route into some of the most exciting topics in mathematics. Z
