By V. A. Smirnov : Simplicial and Operad Methods in Algebraic Topology (Translations of Mathematical Monographs) Simplicial and Operad Methods in Algebraic Topology (Translations of Mathematical Monographs):

In recent years for solving problems of algebraic topology and in particular difficult problems of homotopy theory algebraic structures more complicated than just a topological monoid an algebra a coalgebra etc have been used more

and more often A convenient language for describing various structures arising naturally on topological spaces and on their cohomology and homotopy groups is the language of operads and algebras over an operad This language was propo
