By A. M. Vinogradov : Cohomological Analysis of Partial Differential Equations and Secondary Calculus  
(Translations of Mathematical Monographs) Cohomological Analysis of Partial Differential Equations and

Secondary Calculus (Translations of Mathematical Monographs):

This book is dedicated to fundamentals of a new theory which is an analog of affine algebraic geometry for nonlinear partial differential equations. This theory grew up from the classical geometry of PDEs originated by S Lie and his followers by incorporating some nonclassical ideas from the theory of integrable systems, the formal theory of PDEs in its modern cohomological form given by D Spencer and H Goldschmidt, and differential calculus over commutative algebras.
