1914 1915 Mathematical Techniques for Analyzing Concurrent and Probabilistic Systems (Crm Monograph Series):

The book consists of two sets of lecture notes devoted to slightly different methods of analysis of concurrent and probabilistic computational systems The first set of lectures develops a calculus of streams a generalization of the set of natural numbers based on the coinduction principle coming from the theory of coalgebras It is now well understood that the interplay between algebra for describing structure and coalgebra for describing dynamics is crucial for u
