By William G. Dwyer : Homotopy Limit Functors on Model Categories and Homotopical Categories (Mathematical Surveys and Monographs) Homotopy Limit Functors on Model Categories and Homotopical Categories (Mathematical Surveys and Monographs):

The purpose of this monograph which is aimed at the graduate level and beyond is to obtain a deeper understanding of Quillen's model categories. A model category is a category together with three distinguished classes of maps called weak equivalences, cofibrations, and fibrations. Model categories have become a standard tool in algebraic topology and homological algebra and increasingly in other fields where homotopy theoretic ideas are becoming important such as a
