andrasatpellioniszdotcom holgentechatmaildotcom four zero eight 891 Attractors for infinite-dimensional non-
autonomous dynamical systems (Applied Mathematical Sciences):

The book treats the theory of attractors for non autonomous dynamical systems The aim of the book is to give a
coherent account of the current state of the theory using the framework of processes to impose the minimum of
restrictions on the nature of the non autonomous dependence The book is intended as an up to date summary of the
field but much of it will be accessible to beginning graduate students Clear indications will be given as to which
material i From the reviews ldquo The Carvalho Langa and Robinson monograph focuses primarily on infinite
dimensional systems and evolution equations hellip The monograph is suitable for graduate students with a
background on functional analysis and evolution equa
