By Alexei Kanel-Belov, Louis Halle Rowen : Computational Aspects of Polynomial Identities (Research Notes in Mathematics) this article itemizes the various lists of mathematics topics some of these lists link to hundreds of articles; some link only to a few the template to the right various number theorists home pagesdepartmental listings complete listing a b c d e f g q q a href=quot;listhtmlhquot;gt;h i j k l m Computational Aspects of Polynomial Identities (Research Notes in Mathematics):

4 of 4 review helpful A Report on 25 Years of Development By John Matlock This book represents the results of the last 25 years of study of polynomial Identities The chapter heading of the book describe the major development areas Affine PI algebrasT Ideals and Relatively Free AlgebrasSpecht s Problem in the Affine CaseRepresentation fof Sn and Their ApplicationsS A comprehensive study of the main research done in polynomial identities over the last 25 years including Kemer s solution to the Specht problem in characteristic O and examples in the characteristic p situation The authors also cover codimension theory starting with Regev s theorem and continuing through the Giambruno Zaicev exponential rank The best proofs of classical results such as the existence of central polynomials the tensor product

theorem the nilpoten The present book is written by two of the leading experts in the thoery of PI algebras and fills a serious gap It not only contains a comprehensive study of the main research done in polynomial identitites over the last 25 years Its purpose is also to
