By Vladimir Cuesta Sánchez : Lie algebras, vector fields and constraints geometric langlands seminar this is an archive of email messages concerning the geometric langlands seminar for 2012 13 stylesheet for use when a translation requires any css style changes this stylesheet can be used directly by languages such as chinese japanese and korean Lie algebras, vector fields and constraints:

In the present work we studied some Lie algebras We can choose a Lie algebra L over the field R when we use matrix representations for the elements in the base we can use it to construct vector fields over a manifold M with the same commutation relations for the elements in the base we find one parameter groups and we studied if the vector fields can be Killing vectors We use matrix representations to construct models with the first class constraints in a gauge s
