describes the behaviour of a system or model whose components interact in multiple ways and follow local rules meaning there is no reasonable higher Advances on Iterative Procedures (Mathematics Research Developments):

The most commonly used solutions methods are iterative when starting from one or several initial approximations a sequence is constructed which converges to a solution of the equation Iteration methods are applied also for solving optimisation problems In such cases the iteration sequences converge to an optimal solution of the problem at hand Since all of these methods have the same recursive structure they can be introduced and discussed in a general framework T
