By David N. Cheban : Global Attractors of Set-Valued Dynamical and Control Systems (Mathematics Research Developments)

list of the greatest mathematicians ever and their contributions vol7 no3 may 2004 mathematical and natural sciences study on bilinear scheme and application to three dimensional Global Attractors of Set-Valued Dynamical and Control Systems (Mathematics Research Developments):

In this book the results on set valued dynamical systems dynamical systems without uniqueness and some adjoining problems are studied A part of the book is dedicated to the study of global attractors of control systems as application of our general results concerning the compact global attractors of general set valued dynamical systems This book is the first to study the global attractors of set valued dynamical and control systems The basic results are contained
