From Tilman Wurzbacher : Infinite Dimensional Groups and Manifolds (Irma Lectures in Mathematics and Theoretical Physics) in mathematics the teichmller space ts of a real topological or differential surface s is a space that parametrizes complex structures on s up to the action in mathematics hyperbolic geometry also called bolyai

lobachevskian geometry or lobachevskian geometry is a non euclidean geometry the parallel postulate of Infinite Dimensional Groups and Manifolds (Irma Lectures in Mathematics and Theoretical Physics):

The volume is a collection of refereed research papers on infinite dimensional groups and manifolds in mathematics and quantum physics Topics covered are new classes of Lie groups of mappings the Burgers equation the Chern Weil construction in infinite dimensions the hamiltonian approach to quantum field theory and different aspects of large N limits ranging from approximation methods in quantum mechanics to modular forms and string gauge theory duality The volume About the Author Tilmann Wurzbacher is Professor at the Mathematics Department of the University of Metz France
