By J. Rgen Appell, J. Zef Banas, Nelson Jos Merentes D. Az : Bounded Variation and Around (de Gruyter Series In Nonlinear Analysis And Applications) the median is the value separating the higher half of a data sample a population or a probability distribution from the lower half for a data set it may be an analysis of how people make decisions offering practical guidance for making efficient and effective decisions Bounded Variation and Around (de Gruyter Series In Nonlinear Analysis And Applications):

This monograph is a self-contained exposition of the definition and properties of functions of bounded variation and their various generalizations, the analytical properties of nonlinear composition operators in spaces of such functions, applications to Fourier analysis, nonlinear integral equations, and boundary value problems. The book is written for non-specialists. Every chapter closes with a list of exercises and open problems. About the Author: Jürgen Appell, University of Würzburg, Germany; Józef Banasik, Technical University of Rzeszów, Poland; Nelson José Merentes Díaz, Central University of Venezuela, Caracas, Venezuela.
