By Martin Väth : Topological Analysis (de Gruyter Series In Nonlinear Analysis And Applications) de gruyter in nonlinear analysis and applications has 19 entries in the series de gruyter series in nonlinear analysis and applications methods concerning the topological structure of fixed point de gruyter Topological Analysis (de Gruyter

Series In Nonlinear Analysis And Applications):

This monograph aims to give a self contained introduction into the whole field of topological analysis Requiring essentially only basic knowledge of elementary calculus and linear algebra it provides all required background from topology analysis linear and nonlinear functional analysis and multivalued maps containing even basic topics like separation axioms inverse and implicit function theorems the Hahn Banach theorem Banach manifolds or the most important co About the Author Martin Vath Freie Universitat Berlin Germany
