directory hidden markov model hmm is a statistical markov model in which the system being modeled is assumed to be a markov process with unobserved ie hidden states Continuous-Time Markov Decision Processes: Theory and Applications (Stochastic Modelling and Applied Probability):
Continuous time Markov decision processes MDPs also known as controlled Markov chains are used for modeling decision making problems that arise in operations research for instance inventory manufacturing and queueing systems computer science communications engineering control of populations such as fisheries and epidemics and management science among many other fields This nbsp volume provides a unified systematic self contained presentation of rece From the reviews ldquo The book consists of 12 chapters hellip this is the first monograph on continuous time Markov decision process hellip This is an important book written by leading experts on a mathematically rich topic which has many applications
