t3a target tracking for radar systems an historical overview from the vol7 no3 may 2004 mathematical and natural sciences study on bilinear scheme and application to three dimensional convective Topology of Digital Images: Visual Pattern Discovery in Proximity Spaces (Intelligent Systems Reference Library):

This book carries forward recent work on visual patterns and structures in digital images and introduces a near set based a topology of digital images Visual patterns arise naturally in digital images viewed as sets of non abstract points endowed with some form of proximity nearness relation Proximity relations make it possible to construct uniform topologies on the sets of points that constitute a digital image In keeping with an interest in gaining an understan From the reviews ldquo This book presents the recent research results of visual patterns in proximity spaces in a very easy to follow way hellip a research exposition for mathematicians computer scientists engineers and for all who want to familiarize w
