By Jonathan A. Hillman, Hillman Jonathan : Algebraic Invariants of Links (Series on Knots and Everything)
series on knots and everything algebraic invariants of links is masterful offering a survey of work much of which has not been summarized elsewhere buy algebraic invariants of links series on knots and everything 52 2nd revised edition from whsmith today Algebraic Invariants of Links (Series on Knots and Everything):

This volume is intended as a reference on links and on the invariants derived via algebraic topology from covering spaces of link exteriors. It emphasizes features of the multicomponent case not normally considered by knot theorists such as longitudes, the homological complexity of many variable Laurent polynomial rings, free coverings of homology boundary links, the fact that links are not usually boundary links, the lower central series as a source of invariants, nilpotent group theory, and the fact that links are not usually boundary links. Jonathan Hillman has successfully filled an unfortunate gap in the literature of low dimensional topology. With this up to date book we have a reference covering a range of topics that until now were available only in their original sources. Hillman
