the geometric langlands seminar for 2012 13 links to over 100 dissertations in various languages maintained by keith matthews Multiple Zeta Functions, Multiple Polylogarithms and Their Special Values (Series on Number Theory and Its Applications):

This is the first introductory book on multiple zeta functions and multiple polylogarithms which are the generalizations of the Riemann zeta function and the classical polylogarithms respectively to the multiple variable setting It contains all the basic concepts and the important properties of these functions and their special values This book is aimed at graduate students mathematicians and physicists who are interested in this current active area of research
